

Poultry Permits

Hatcheries, breeding flock facilities, and chick sales/stores in South Dakota are required to be permitted with the AIB. Steps to obtain or renew a permit are outlined below:

1. File an application with the AIB
 - The application gathers information about the facility that includes the types of poultry, hatchery capacity, sources of birds, and planned activities.
 - Applications can be found here or requested by calling the AIB 605.773.3321.
 - [Poultry - Hatchery Permit Application](#)
 - [Poultry - Chick Store/Chick Sales Permit Application](#)
2. Establish a *Salmonella* Pullorum-Typhoid (P-T) Clean Flock by completing the following test requirements:
 - All hatcheries and breeding flocks must be classified as *Salmonella* Pullorum-Typhoid (P-T) Clean.
 - Test the breeder flock negative for (P-T).
 - Acquire all poultry from a P-T clean source and maintain the documentation
3. Have an AIB representative inspect the operation:
 - Key components of the inspection include reasonably clean and sanitary conditions, identification of hatching eggs and baby poultry and sales records to ensure proper traceability.

When all the requirements have been met and the operation has been approved, a permit will be issued which can be used at community sales and exhibitions to assure customers, managers, and other participants that poultry are tested and healthy according to State standards. Permitted hatcheries, breeding flock facilities, and chick sales/stores also qualify to be NPIP participants.
